Attention-LSTM Enhanced Risk-Aware Vertical Handoff Algorithm for UAV Remote Sensing Heterogeneous Networks

Unmanned aerial vehicle (UAV) remote-sensing systems support large-area Earth observation, including disaster assessment and environmental monitoring. During cruise missions, UAVs frequently cross 5G, LTE, and Wi-Fi coverage boundaries, creating vertical-handover (VHO) challenges involving decision latency, ping-pong handovers, and fixed attribute weights that cannot adapt to changing flight phases. This study proposes the long short-term memory (LSTM)-attention-based adaptive vertical handover algorithm (LAAVHA) and further develops the attention-LSTM enhanced risk-aware vertical handoff algorithm (ALERA) using adaptive dynamic hysteresis (ADH) and a risk-sensitive technique for order preference by similarity to the ideal solution (RS-TOPSIS). LAAVHA integrates stacked-LSTM state prediction, attention-based dynamic weighting, improved TOPSIS ranking, and dual-hysteresis ...

This document certifies that the manuscript listed above was copy edited for English language by LetPub, with regard to grammar, punctuation, spelling, and clarity. No artificial intelligence tools were used by LetPub to edit or prepare this manuscript for submission. Documents receiving this certification should be regarded as having undergone professional editorial revision for English language before submission. However, the authors may accept or reject LetPub's suggestions and changes at their own discretion and LetPub does not have editorial control over the submitted documents. Submitted documents may have new text that was not provided to LetPub for review. Please use the verification link below to determine the validity of the submitted version.
